

Todd Andrews – Drilling Technologist

Todd Andrews is a 35-year-old drilling technologist working for a major oil company based in Houston, TX. He has a Bachelor's degree in Petroleum Engineering and has been in the oil industry for 15 years. He has worked at his current position for five years. He works in a field office in Colorado, and validates the information put into OpenWells by the drilling consultants. He also provides on the job training on how to use OpenWells for the drilling consultants as needed.

Todd is very detail oriented, and finds many data errors that are missed by the drilling consultants and others at the rig. He works hard to make sure that the information in OpenWells is entered accurately, and is available in time for important reports to be filed. He works with the drilling consultants to help them learn the software, as well as to make sure they know what information need to be recorded and when.

Todd is enthusiastic about learning new software applications and enjoys finding out about new features in the software he currently uses. He is always looking for more formal software training, but is not afraid to dig into a software application and learn by trial and error.

Todd's Goals

Ensure the accuracy of OpenWells information. Todd strives to ensure that all of the information in OpenWells for the wells he is responsible for is entered correctly, and will work with the drilling consultants to see that they learn how to correctly and efficiently enter the data.
